Art Unit: 1731

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over LOWRIE et al in view of MADISON et al and GRIMSLEY et al and WEST.

LOWRIE et al teaches (Figure 5) preheating and/or pre-steaming lignocellulosic chips n(column 1, lines 1-18) passed to a refiner (412) and steam separator (418) and subsequent to steam separation, is passed to a storage vessel (latency chest (446)) and to a screening department (454) wherein the peroxide bleaching agent is added between the refiner and the screening department (425). MADISON et al teaches the bleaching of mechanical pulp in a process similar to LOWRIE et al, wherein the bleaching agent is added between the refiner (secondary refiner) and the screen, and teaches the alternativeness of using peroxide or hydrosulfites, see column 2, lines 24-26. It would have been obvious to use the reductive bleaching agent, e.g. hydrosulfite, for the bleaching agent of LOWRIE et al as the alternativeness of bleaching mechanical pulp is taught by MADISON et al. GRIMSLEY et al teaches when bleaching with hydrosulfites that the access to oxygen should be minimized. It would have been obvious to the artisan when substituting the hydrosulfite of MADISON et al for the peroxide of LOWRIE et al to minimize the access of oxygen as taught by GRIMSLEY et al. It would have been obvious to bleach the pulp under drastic conditions as such is taught by WEST, see WEST for adding a chelating agent just prior to the reducing agent. The use of a chelating agent with

hydrosulfite bleaching agent would have been obvious from the teachings of WEST to stabilize the hydrosulfite, WEST, column 6, lines 25-28.
